Summary

Recently I have completed 3 full-stack websites using **MERN**. Besides, I practiced many big and small projects. I can work with **React Js** (For Frontend), **MongoDB** (For Database), **Express Js & Node Js** (For Backend). **Firebase** is my favorite for authentication and user justification. I am comfortable with **JWT token** to make a website more secure. React Router is a standard library for routing in React. I use **React Router** for routing React Js. I can handle CSS frameworks **Bootstrap, Tailwind, Material Ui**. Among them, I love Bootstrap the most. I also can convert **PSD to HTML** and **Figma to HTML**. I hear about **React Native, SASS, Typescript** and many other technologies and am very curious and interested to explore them more.

Projects

1| A Niche Product Website

Live Link: - <https://sedanmela.web.app/>

Client Site GitHub Repository:

- https://github.com/AlaminHossain01052000/sedan_mela

Server Site GitHub Repository: -

https://github.com/AlaminHossain01052000/sedan_mela_server

- This Website represents a specific product selling website.
- It is a website of a company that only sells Sedan Cars. A user can log in and purchase a product as well as an admin can control the dashboard
- The Login and registration system is formed by google very secure firebase authentication.

2| Trip Organizer Website

Live Link: -<https://trip-tuck.web.app/>

Client Site GitHub Repository: https://github.com/AlaminHossain01052000/trip_tuck_client

Server Site GitHub Repository: - <https://github.com/AlaminHossain01052000/trip-tuck-server>

- It is a website of a travel agency that organizes many tours in Bangladesh
- A traveler can book his/her desired tour location the agency offering

- A normal user only can book a tour. On the other hand, An Admin can manage all the booked tours, make a user admin, and all other administration things.

3| This website is about health care organization and their services

Live Link: - <https://al-health-care.web.app/>

Client Site GitHub Repository: - <https://github.com/AlaminHossain01052000/al-health-care-client>

- On the home page, all the services and specialists of health care are shown
- By Clicking the details button on our services section, a user can see full details about that section as well as by clicking on the Details button of our specialist's section a user can see the full details of the specialist
- There are also Registration and login system included here using firebase technology.

Skills

Frontend=> React Js, React Router
